Dr Pavese's Perspective new products

paint the town pink

Dr Pavese would like to introduce the full line of Colorescience. The mineral pigments reflect light so that the color seems to come from within, softening features, giving the skin a youthful glow. Colorescience products are formulated for all skin types and have a positive effect on the actual condition of the skin.

It's All In The Eyes

We express ourselves with our eyes. People look at eyes, trying to understand every raised brow and twinkle of excitement. A telling glance. A sexy stare. Bring your inner beauty out to play! *Colorescience Genie Colores* give you the most amazing results and versatility ever in one product. Achieve intense color, infinite wearability, incredible blendability and soft focus effects...all in this little genie bottle.

Skinstant Gratification

Colorescience Foundation uses micronized mineral pigments, which cover better than liquid foundation because they bond with the skin rather than creating an artificial layer and naturally match your skin color for a more even appearance. The light minerals feel weightless on your skin. The minerals in the foundation provide SPF 20 sun protection that's waterproof for up to six hours. It's available in 11 shades...for almost every color under the sun!

Lip Candy Glaze

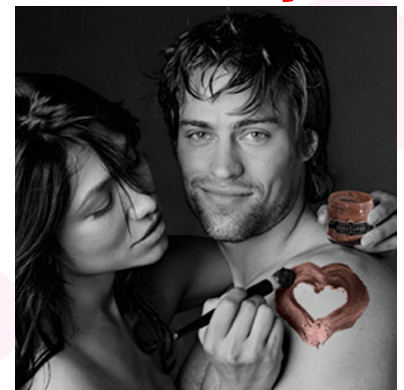

The sweetest treat comes from Colorescience. Six irresistible lip glazes with a rich, cool flavor of pure chocolate extract, with a hint of mint.

Fill in your lines, pores, & imperfections!

Colorescience Line Tamer is a skin brightener that is your new secret weapon against aging. The yellow color hides red discoloration while the active ingredients promote the actual reduction of redness in the skin. It works especially well on rosacea and on hands where aging is most noticeable. *It smoothes lines, shrinks pores and brightens the skin.* It provides up to SPF 20 to protect the skin from sun damage.
